

# Natural Gas: Efficient, Reliable, and SAFE

Did you know that, dollar for dollar, natural gas provides more warmth than heating oil, propane or electricity. That's why natural gas is our country's most popular home heating fuel – heating more homes than all other energy forms combined.

The City of Pittsfield runs one of the most reliable natural gas systems around, providing gas to more than ### customers through a network of underground distribution lines. We work hard to meet your energy needs in the safest, most reliable way possible. You can help keep our gas system safe for everyone by following these gas safety tips:

Help us protect our gas delivery system. Supply line breaks can be expensive and dangerous. Before you dig, call JULIE at 1-800-892-0123. They will help you dig safely by identifying the location of buried utility lines.

Natural gas is treated with chemicals to give it a distinctive "rotten egg" odor. If you smell this odor, or think you might have a leak, leave the area IMMEDIATELY. From a nearby building, call the Utility Department at 333-3333 or dial 9-1-1.

For More Information on our natural gas system, call 999-999-9999.
